Streamline Your Operations & Save Money!

Placing labels on items, cartons, or pallets is an everyday occurrence in most Distribution Center and Manufacturing environments. The amount of labor required to manually accomplish this work can be significant, even with average volume levels.

Automating the labeling process can save labor and improve accuracy, reducing both salary expenses and wasted supplies due to overprinting or mislabeled items. Avery Dennison has been supplying automated labeling solutions for many years in both Distribution Center and Consumer Packaged Goods environments. Check out Avery Dennison's offering of automated labeling solutions, designed to *streamline your operations and save you money.*

Avery Dennison ALX Series Label Printer Applicator Industrial Strength Label Printing & Application System

- **Reduce Labor** – eliminate printing rooms and bursting, collating, label preparation functions. Print when needed, where needed, with minimal labor.
- **Eliminate Waste** – print only the labels you need, no overprinting or reprinting needed.
- **Improve Accuracy** – apply labels immediately after printing, maintaining control over items and labels at all times.
- **Save Resources** – with Avery Dennison Ribbon Saver technology, a blank space on the label does not mean blank space on the ribbon. The ALX can be programmed to only advance ribbon when actually printing.

Avery Dennison ALS Series Label Applicator Speed and Efficiency in a Label Application System

- **Increase Efficiency** – maximize throughput with accurate and repeatable label placement.
- **Improve Quality** – label every item, every time, with no missed items and no duplicate labels.
- **Save Labor** – eliminate labor costs from repetitive jobs and replace with an industrial strength solution that does not get tired or loose interest.
- **Keep It Clean** – option available for use in wash-down environments such as food preparation and distribution.
