

Monarch® Rework Solutions for Distribution Centers from Avery Dennison

Monarch®
Products and Services

Speed Your Items to the Store!

Eliminate walking times, double handling, over-printing, and mis-marking. Avery Dennison has Rework Solutions that allow you to take the printing to the product, improve your labor intensive processes and cut waste. With a Monarch Rework Solution from Avery Dennison, items will speed their way to the store, and labor requirements are minimized in your distribution center.

Monarch® Pathfinder® Ultra® Rework Solution

The Monarch® Pathfinder® Ultra® Platinum™ printer is a scanner, data collector and label printer in one device.

When a barcode is scanned or a product ID is entered, the Ultra Platinum printer can access a centralized database and then create a new product label with correct format and item information. The Ultra Platinum printer can track the number of items worked and report that information back to the central computer. The one-piece design allows a user to scan, print and apply a label all in one smooth motion without touching the

item multiple times. Accurate placement is easy and fast.

- The Ultra Platinum printer improves accuracy because the item being reworked is never out of the operators control. You touch the product once to complete the job, not twice as is typical with most processes.
-
- The Ultra Platinum printer reduces waste by eliminating time walking to a central printer and by printing on-demand only those labels needed without the need for separator marked labels.

Monarch® Sierra Sport® Rework Solution

The Monarch® Sierra Sport2™ and Sierra Sport3™ portable printers are small, rugged and reliable printers that can stand up to the most laborious rework activity. Designed for speed and label clarity, the Sierra Sport printers can be easily moved to areas needing additional printing capabilities.

What Our Customers Say:

“We saved a significant amount of money in cross docking merchandise from door to door because we’ve taken away all the label intensive processes. Avery Dennison is a vital member of the SAKS planning and implementation team.” - SAKS, Inc., Ronnie Johnson, Vice President, Strategic Planning and Process Improvement.
